Process Equipment and Systems

BB40 Bag Tipping Station

Self contained for dust recycle and remote bag breaks provide great dust control when discharging 25Kg bags. We locate out grate a little lower than our bag shelf to eliminate flushing out of unit while unloading. A rear baffle forces high velocity air down past bag being unloaded.

Safe

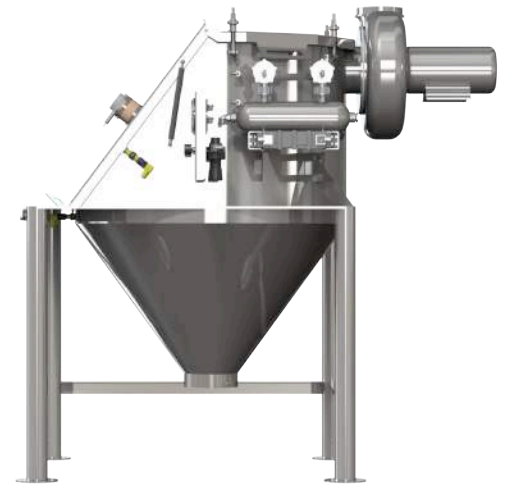

Clean air is drawn past operator and down past bag

- Self contained pulse jet filter cleaning-bags
- Media is tool free removed-bags snap into position
- Easily removed rear baffle directs air down and provides fast rear plenum access
- Heavy duty grate mounted on rails for easy remove
- 6" wide bag shelf mounted 36" above floor
- 1" radiused vertical corners
- Options to include integrated scalper

High Velocity dust control

High airflow down past bag expands while in dusty rear air plenum

- Cast aluminum exhaust fan with direct drive 3 HP motor
- Top, front or side loading filter media-all tool free
- Square body or round body models
- Formed heavy duty leg set
- Robust construction
- Adjustable hinged cover
- Optional integral scalper

Food grade/ USDA-3A dairy/ Chemicals/ Plastics/ Nutraceuticals
